```
>>we need 2 vm's for the practical
>>Select  1st vm go to file(in top left corner)
  select preferences
  go to network then
  add  new nat then
  click ok

>>Select vm1 again
  go to setting
  so to network
  attached to: Nat Network
  name: NatNetwork
>>now go to vm2
  setting
  network
  attachedto: nat network
  name: NatNetwork

>>start both vm's
in vm1 create a file a.txt

>>scp a.txt
usernameofvm2@ip_address_of_vm2:/location_where_to_copy_the_file_in vm2

(to find username of vm2 go to terminal)
(root@localhost)
ip:address = ifconfig enp0s3
root is the username
```
